

WiseCash (Smart Money) Retail Management System

Client Consultation & Market Pricing Blueprint — Tanzania

Date: September 17, 2026 **Target Market:** Tanzania (Dar es Salaam, Arusha, Mwanza)

Participants: Client & Antigravity AI Advisor **Currency:** TZS / USD

USER

Yoo, i got an amazing question right now, you readyy?

ASSISTANT

I'm ready! Hit me with it. What's on your mind?

USER

If you were making this wisecash system for a client, using normal rates people charge for services like this in Tanzania, how much would you charge them?

ASSISTANT

Detailed Advisory Response

In Tanzania, pricing a retail management system like **WiseCash** (Smart Money) depends heavily on whether you are selling it as a **bespoke custom software project** (exclusive build for one client), a **turnkey package** (software + hardware + setup), or a **recurring SaaS/subscription**.

WiseCash is not just a simple calculator; it has **bilingual Swahili/English support, PWA offline capability, inventory, HR/payroll, P&L analytics, barcode scanning, thermal receipt printing, and role-based access control** (which solves the #1 pain point in Tanzanian retail: *wizi wa wafanyakazi* / employee shrinkage).

1 Custom Software Build (Single Client Ownership)

If a business (e.g., a supermarket in Kariakoo/Mlimani, a pharmacy chain, or a hardware store in Sinza/Arusha) hires you to build and deliver this system exclusively for them:

Provider Tier	Price Range (TZS)	Price Range (USD)	What's Included
Freelancer / Indie Dev	TZS 2,500,000 – 5,000,000	~\$1,000 – \$2,000 USD	Full code deployment, Supabase database setup, custom branding, 1 month warranty/support.
Local Tech Agency (Dar es Salaam)	TZS 7,000,000 – 15,000,000+	~\$2,700 – \$6,000 USD	Discovery, UX customization, training, SLA (3–6 months), staging/prod infra, documentation.

2 Turnkey Package (The Most Popular Model in Tanzania)

Most shop owners don't want just code or a URL—they want a complete, ready-to-use checkout counter. If you bundle the software with hardware and onboarding:

- **Hardware Bundle:**
 - 80mm or 58mm Bluetooth/USB Thermal Receipt Printer: **TZS 180,000 – 350,000**
 - Handheld 1D/2D Barcode Scanner: **TZS 80,000 – 150,000**
 - Android Tablet (10") or Refurbished All-in-One Desktop: **TZS 400,000 – 800,000**
- **Service & License:**
 - Software Lifetime/Annual License: **TZS 800,000 – 1,500,000**
 - Initial Stock Upload (Excel/data entry) & Staff Training: **TZS 200,000 – 400,000**

👉 **Recommended Total Turnkey Package to Quote: TZS 1,800,000 – 3,200,000 per shop**

3 SaaS / Subscription Model (Best Long-Term Strategy)

If you retain the intellectual property and license WiseCash to multiple shopkeepers as a service:

- **One-time Setup & Onboarding Fee: TZS 150,000 – 300,000**
(Covers setting up their branch, uploading inventory catalog, configuring printers, and training cashiers).
- **Monthly Subscription: TZS 35,000 – 70,000 / month** per branch (~\$15 – \$28 USD).
- **Annual Subscription (with 2 months free): TZS 350,000 – 650,000 / year.**

4 Optional Add-ons & Recurring Services

- **Monthly Support & Cloud Backup Retainer:** TZS 50,000 – 100,000 / month
- **Bulk SMS Integration (Beem / NextSMS):** TZS 30 – 50 per SMS (for customer receipts and promotional alerts)
- **TRA VFD / EFD Fiscal Integration:** If you integrate virtual fiscal device APIs (TRA E-Tax / VFD via approved vendors), you can easily charge an additional **TZS 500,000 – 1,200,000** setup fee plus recurring compliance fees.

Key Value Points to Pitch to Tanzanian Clients

1. **Kiswahili Interface:** Makes cashier onboarding instant with zero language barrier.
2. **Offline Mode (PWA):** Works seamlessly during power cuts (Tanesco outages) and internet drops.
3. **M-Pesa / Tigo Pesa / Airtel Money Payment Categorization:** Tracks mobile money transactions cleanly without balancing discrepancies at the end of the day.
4. **Audit Trail & Role Locks:** Cashiers cannot delete sales or manipulate stock without manager/admin permissions.
